## Sample Questions and Model Answers from the November 2013 Memorandum

Here are examples of typical questions from the November 2013 paper and how the memorandum suggests answering them:

### Question 1: Describe the formation of river valleys.

Model Answer:

River valleys are formed through the process of erosion over thousands of years. As a river flows, it erodes the land through hydraulic action, abrasion, and solution. These processes carve out a valley, which becomes deeper and wider over time. The formation begins with the river cutting into the landscape during its youthful stage, creating features such as V-shaped valleys. During the mature stage, lateral erosion widens the valley, and features like floodplains and meanders develop. In the old stage, the river floodplain becomes broad, and the valley may be filled with alluvium, supporting floodplain agriculture.

### Question 2: Explain the impacts of urbanization on the environment.

Model Answer:

Urbanization leads to increased pollution due to higher emissions from vehicles and industries. It results in the loss of natural habitats, leading to a decline in biodiversity. The expansion of urban areas often causes deforestation, which contributes to climate change and reduces natural carbon sinks. Urban areas also experience increased waste generation and water runoff, which can lead to flooding and water pollution. Additionally, the heat island effect makes cities warmer than surrounding rural areas, affecting local climates and energy consumption.
